MACHINE INSPECTION

ASSEMBLY AND FUNCTIONAL TEST SYSTEMS

FOR HIGH SYSTEM AVAILABILITY
AND MAXIMUM OUTPUT

During the inspection, experienced service technicians examine your teamtechnik equipment in regards to signs of wear, the general condition and optimization for reliable machine operation. To avoid production downtimes, recommendations are given for care, cleaning, maintenance, servicing, repairs or the preventive replacement of components. The aim is to achieve maximum output and to increase the service life of your machines.

The inspection includes

- _ Recording of the actual state of the entire system and the individual stations
- _ Checking the safety functions
- _ Status recording of adjustment tools
- _ Review of the the pneumatic and fluid components
- _ Inspection of the feeding systems
- _ Visual inspection of wear parts and electrical components
- _ Analysis of the latest faults and messages
- _ Perform minor adjustment and repair tasks
- _ Documentation of the inspection with a checklist
- _ Final meeting with initial recommendations

Brief overview of your benefits

- _ Higher system availability enables maximum production rate
- _ Increase in production quality and production stability
- _ Costly repairs and unplanned downtimes can be prevented
- _ Value retention of your investment
- _ Plannability of operating costs and maintenance activities
